

MyWhistleBox API Test Case

Congratulations! If you are reading this, we have successfully sent you a document using the new MyWhistleBox API. The API (Application Programming Interface) is a way for 3rd parties to upload documents in an automated way without going through the normal uploading via the web site.

Currently the API supports only uploading documents but will be expanded in the future. This is a premium feature and available for Pro and Team account plans only. Additional fees based on number of monthly transactions will apply.

If you're interested, this approach does require a small bit of programming on the server but we will supply examples and test scripts which should make this process very simple for any programmer. For Pro and Team plans, an additional Api Keys tab will be presented under Account Settings. The API requires a custom Key which can be obtained from the Api Keys tab.

Thank you for helping us test this new exciting feature.
